

## Sprint 1 Retrospective

Well	Wrong	Actions to Improve
Keeping Scrum activities quick and concise for optimizing time	Technical complexity of some user stories was underestimated	Improve team communication
Scrum Master is helping to get things organized	Some User stories could have been split into smaller pieces for better estimation	Simplify development for the purpose of this prototype (team)
Our Definition of Done is good and it's working	There was a learning curve for some of the team members on the technology stack	Double check the technical complexity of user stories
A successful discovery phase with Foster parent interview and early revisited wireframes	We're not simplifying enough for the purpose of this prototype	Discuss priorities with Product Manager as we discover new challenges
Good level of details in user stories and acceptance criteria
